

CHANGING the CLIMATE of worker health and safety

2023 NORA
Online Symposium

A Forum on Lessons and Actions to Foster a Resilient Workforce

Climate change is an urgent public health issue with significant impact on environmental, social, mental, and physical health. Drought, floods, extreme heat, wildfires, and other weather-related events can lead to multiple health and safety risks, including: heat-related and respiratory illnesses, physical and mental health effects, and disease and pest exposures. Without proper protection and training, these risks are even greater among vulnerable populations such as outdoor workers, migrant agricultural and construction laborers, or those involved in disaster response.

THURSDAY, APRIL 27

12:00pm - 2:30pm Central

ONLINE VIA ZOOM
